Sequence 36, Application US/10209787

Publication No: US2030217377A1

GENERAL INPORMATION:

APPLICANT: Kniec, Eitc B.

APPLICANT: Gamper, Howard B.

APPLICANT: Rice, Michael C.

TITLE OF INVENTION: Targeted Chromosomal Genomic Alterations with Modified Single TITLE OF INVENTION: Stranded Oligonucleotides

FILE REFERENCE: Napro-4

CURRENT APPLICATION NUMBER: US/10/209,787

FILE OF INVENTION: Stranded Oligonucleotides

FILE OF INVENTION: Stranded Oligonucleotides

FILE OF INVENTION: Stranded Oligonucleotides

FILE REFERENCE: Napro-4

CURRENT FILING DATE: 2000-07-07-30

Sequence 9, Application US/10176055

Sequence 9, Application US/10176055

PUBLICANT: Evident Technologies

TITLE OF INVENTION: Halprin Sensors Using Quenchable Fluorescing Agents

TILE OF INVENTION: 11739/26

CURRENT FILING DATE: 2002-06-21

PRIOR APPLICATION NUMBER: 60/299,460

PRIOR PILING DATE: 2001-06-21

NUMBER OF SEQ ID NOS: 11

SOFTWARE: Patentin Ver. 2.1

LENGTH: 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OTHER INFORMATION: Target sequence that is desired to be detected and OTHER INFORMATION: that has a nucleotide sequence that is OTHER INFORMATION: complementary to the sequence of complementary OTHER INFORMATION: probe of hairpin loop assembly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 19, Application US/09983210
Patent No. US20020160383A1
GENERAL INFORMATION:
APPLICANT:
TITLE OF INVENTION: THE USE OF NUCLEIC ACID ANALOGUES IN
TITLE OF INVENTION: DIAGNOSTICS AND ANALYTICAL PROCEDURES
NUMBER OF SEQUENCES: 40
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
